

Malayan Sun Bear

Helarctos malayanus

Fast Facts

In the dense forests of Southeast Asia, you can find the smallest of the bear species - the Malayan sun bear.

They are also known as the honey bear, dog bear, or Malay bear. Their big paws and sharp claws help them climb effortlessly, even at night since they are nocturnal.

Sun bears are omnivores and will eat anything from fruits to bugs to honey to rodents.

Conservation groups are working hard to save these unique bears from deforestation, poachers, and the pet trade.
