Shy, agile and cute are three words to describe sun bears. The scientific name for sun bears is *Helarctos Malayanus* but they are also known as Malayan sun bears. These mammals get their name from the golden or white patch on their chest. Sun Bears are the smallest member of the bear family. They are omnivores and will eat insects, leaves, lizards and berries. Their favorite snack is honey and sun bears will often use their long tongue to get the honey out of beehives. Sun bears can be found living in forests in Southeast Asia where they use their long claws to climb trees. Unfortunately, sun bears are considered vulnerable to extinction due to habitat loss, poaching and illegal pet trading. We must do all we can to protect this special species!
